

CROSS SECTION OF CONCRETE INTERNALLY SEALED

Results of application:

1. Seals concrete against water seepage, vapor, and radon.
2. Bonds, strengthens and hardens concrete, reduces cracking, makes concrete denser and stronger, protects against pitting, spalling, and crumbling, hardens the surface, reduces abrasion and concrete dusting.
3. Neutralizes alkali, preserves concrete, protects paints and covering, neutralizes "free" lime, stops efflorescence
4. The surface remains non-slippery and paintable.
5. Deep-cleans concrete, purges dirt, oil spills, and minerals
6. Protects against "freeze-thaw" damage and road salts
7. Protects against de-icing and other chemicals.
8. The sealer also bonds and seals already deteriorated or seeping concrete.
9. Before concrete resurfacing or patching, seal the old concrete with Foxfire Products to protect the "cold joint" with the new concrete against alkalis and separation
10. Reduces settlement (trip points)
11. Mitigates radon gas
